News and Presentations

WUNTRONIC is pleased to announce:

Click to enlarge

WUNTRONIC introduces new heat flow sensors produced in Germany. The sensors are available in square and round designs. The heat flow sensors generate millivolt of voltages in proportion to the heat flow. Optionally, the sensors can also be equipped with a thermocouple or NTC and supplied with customer-specific cable lengths.

Hauptproduktmerkmale:

- Direct heat flow output
- Bidirectional heat flow measurement
- Waterproof and impervious to high pressures or vacuum
- Self-generating output - does not require amplifier or power supply
- Easy to install by gluing

Applications:

- Green roofs
- Development of insulation for walls and roofs
- Submarines and ships
- Biomedicine
- Refineries and reactors
- Aerospace
