Description
The independently operating Tesla Meter / Gauss Meter Type KO-
SHAHA analog for connection to a digital multimeter, oscilloscope,
data logger or data acquisition card is an inexpensive alternative to
the handheld and USB Tesla meter / Gauss meters.

The KOHSHAHA analog is powered by two button batteries. The
measurement is started by pressing the start button. The measured
value is output proportional to the measured value as an analog
signal (1 mV corresponds to 1 mT).

Since digital multimeter already are in most universities and tech-
nical schools anyway in large quantities for the training of students
and pupils present, the Tesla Gauss KOHSHAHA analog is an ideal
and inexpensive way each student to give a magnetometer in
hands.
